

The JAR file provided in this demo package is limited to encoding standard QR Code only. It is not able to encode the FNC1, generate [GS1 symbols](#) and it does not contain Image Overlay (as [Center Override](#)) technology. It also cannot generate EPS and SVG images.

The purchased version contains all functionality and is provided with a 30 day money back satisfaction guarantee. If it is necessary to test all features with this product, the purchased version is required.

Below is an example of static data generated from the fully functional Java version of this product. The example is encoding “www.IDAutomation.com” with QRCodeImageGeneratorExample.java and returns EPS, GIF, SVG and JPEG images. The following is an embedded GIF image:

To understand how the encoder works, refer to the source code within QRCodeImageGeneratorExample.java
